

Linear Regression

1. QA Salary

Adding the components:

Base salary = 3.10 LPA

Experience = 9.50 LPA

Skill rating = 7.00 LPA

3.10

+

9.50

+

7.00

=

21.7

LPA

Calculated salary = ₹21.67 LPA.

2. Food Time

Adding the components:

7.56

+

16.5

+

9.3

=76.6

minutes

Calculated time = 76.56 minutes.

3. Classification Algorithm

a) Age <30 and Govt satisfaction less ,urban

[Upgrade](#) [Share](#) [...](#)

Using the numbers exactly as provided, the scores are:

Class	Final score
Party A	-9.36
Party T	8.57
Party C	0.235
Undecided	0.978

So the ranking for this voter is:

1. Party T — 8.57
2. Undecided — 0.978
3. Party C — 0.235
4. Party A — -9.36

Winner

Party T has the highest score by a large margin.

b) Age >50 and Govt satisfaction less ,non urban

Upgrade

For this voter, the calculated scores are:

Class	Final score
Party A	-3.81
Party T	-0.037
Party C	3.13
Undecided	0.971

Ranking

1. Party C — 3.13 🏆
2. Undecided — 0.971
3. Party T — -0.037
4. Party A — -3.81

Winner: Party C

The main driver is **age**: Party C has a relatively strong positive age coefficient (+0.129),
